

Diet

High Fibre Low Starch Rabbit Pellets

A diet for Laboratory Rabbits fortified with vitamins and minerals to meet the requirements of these animals after the diet is autoclaved or irradiated.

- **Formulation change November 2007**
- Proximal nutrient composition has been kept very similar to the old ration, some vitamin levels have been increased. The new formulation contains less Lucerne chaff and more oaten chaff.
- If the diet is to be autoclaved, the recommended conditions are: Autoclave at 120° C for 20 minutes with a post autoclaving vacuum drying cycle. Some clumping of the diet can be expected, but the diet clumps can usually be easily broken. Modifying the drying time to leave some residual moisture in the diet can minimise the clumping. Do not autoclave at 135° C as this will result in significant clumping that will be difficult to break.

Calculated Nutritional Parameters
