Meat Free Rat and Mouse Maintenance Diet

A fixed formulation diet for Laboratory Rats and Mice fortified with vitamins and minerals to meet the requirements of breeding animals after the diet is autoclaved or irradiated.

- All nutritional parameters of this diet meet or exceed the NRC maintenance guidelines for Rats and Mice.
- The diet has been designed as a maintenance ration for non breeding mature rodents.
- Protein content has been reduced from 19% in the standard ration to 15%.
- Crude Fibre content has been increased from 4.5% to 6.5%.
- Calculated energy has been reduced from 14.3 MJ/Kg to 13 MJ/Kg.
- Mineral content has been changed from the standard ration, reducing Ca and P but maintaining the Ca:P ratio.
- Mammalian meals have been excluded from the diet, however the diet does contain fish meal. We have formulated totally vegetarian diets, and maintained colonies for some time on these diets. Please contact us if you require such a diet.
- The feed is manufactured in a cylindrical form with a diameter of around 12 mm, length is variable from 10 mm to 30 mm. We have found that this form is ideal for overhead hopper feeding, maximising the ease of handling whilst minimising fines formation and the risk of bridging in the feed hopper. Pellet strength has been kept lower than conventional pelletised diets. While this leads to a slight increase in transit and storage damage to the diet (fines generation), we have found that juvenile mice often have a lower feed intake on harder pellets.
- The diet is packed in permeable bags suitable for direct loading into an autoclave. It is recommended that the diet be autoclaved at 120° C for 20 minutes with a post autoclaving vacuum drying cycle. Some clumping of the diet can be expected, but the diet clumps can usually be easily broken. Modifying the drying time to leave some residual moisture in the diet can minimise the clumping. Do not autoclave at 135° C as this will result in significant clumping that will be difficult to break.

Diet Form and Features
<ul style="list-style-type: none"> • Cereal grain base diet. 12 mm diameter pellets. • Pack size 5 Kg, vacuum packed under nitrogen in oxygen impermeable plastic bags. Packs are double bagged and packed into cardboard cartons to protect them during transit and to ensure sterility is maintained. • Also available in 10 and 15Kg woven polyethylene bags, suitable for direct loading into an autoclave. • Diet suitable for irradiation, also suitable for autoclave. • Lead time 2 weeks or 4 weeks for irradiation.

Ingredients
<p>A Fixed formula ration using the following ingredients: Wheat, Bran, Oats, Soya meal, Fish meal, Mixed vegetable oils, Canola oil, Salt, Calcium Carbonate, Dicalcium phosphate, Magnesium oxide, and a Vitamin and trace mineral premix.</p>

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or autoclave could change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
