23% Fat Rodent Diet Based

A semi-pure high fat diet formulation for laboratory rats and mice based on Research Diets D12451. Some modifications have been made to the original formulation to suit locally available raw materials.

- Fatty acid profile of this diet has been modified from D12451 specifications
- 46% of total calculated energy is from lipids, 20% of total calculated energy from protein and the remainder from carbohydrates.
- We have evidence that vitamin losses can occur during irradiation at 25K Gy. Please contact us for more information if the diet is to be irradiated.

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
