

Diet SF04-060 14% Protein Modification of AIN93G Rodent Diet

A semi-pure low protein modification of AIN93G.

- Protein concentration has been reduced from 20% to 14%.
- Modifications have also been made to inclusion rate of Potassium citrate, potassium phosphate and potassium dihydrogen phosphate to balance minerals found in casein.
- Energy has been allowed to vary with differing protein content.
- Starch content has been increased to make up the balance of the diet.

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Post diet treatment by irradiation can change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
