Omnivorous Primate Diet

A primate diet specifically designed for omnivorous primates. This diet would suit a range of primates including *Macaca* sp. (Macaque)

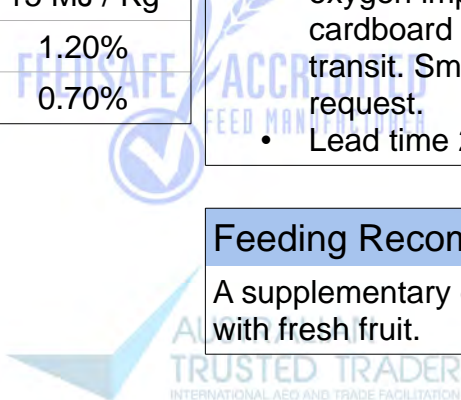

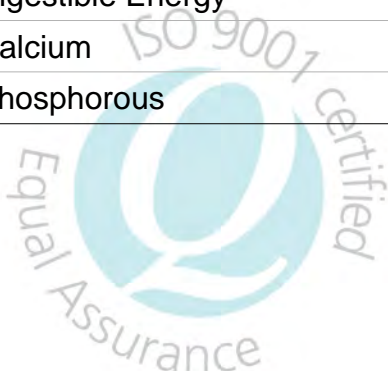

- Although this diet has been designed to provide complete nutrition, it is recommended that it be fed along with fresh fruit.
- Stabilised Vitamin C in the form of the Roche product *Stay C* has been added to the diet. While the Vitamin C activity should retain for the shelf life of the diet, we would recommend that an additional Vitamin C source be included in the complete diet.
- The diet contains a banana flavouring as standard. In the past we have found this improves diet palatability.
- To retain diet palatability the diet is vacuum packed in three layers of packaging, the first layer being a paper liner followed by two separate layers of low oxygen permeability plastic.
- This diet and packaging system is suitable for irradiation if required.
