

## Diet **Guinea Pig and Rabbit Plus 5% Peanut Oil, SF00-218** **0.5% Cholesterol, 1% Methionine**

A fixed formulation diet based on our Guinea Pig and Rabbit pellets with 5% Peanut Oil, 0.5% cholesterol and 1% Methionine added.

- If Diet is to be autoclaved, the recommended conditions are. Autoclave at 120° C for 20 minutes with a post autoclaving vacuum drying cycle. Some clumping of the diet can be expected, but the diet clumps can usually be easily broken. Modifying the drying time to leave some residual moisture in the diet can minimise the clumping. Do not autoclave at 135° C as this will result in significant clumping that will be difficult to break. It must be remembered that cholesterol is likely to be degraded by autoclaving.

### Calculated Nutritional Parameters

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.**

We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
