

Diet SF02-009 Low Thiamine Modification of AIN93G Rodent Diet

A semi-pure low thiamine modification of AIN93G formulated for laboratory rats and mice.

- Sodium caseinate has been used as the protein source due to the lower Thiamine content.
- Salt addition has been reduced to account for increased sodium content of caseinate. The sodium content of the diet is however higher than that in AIN93G, this was required to satisfy the minimum chloride requirements.
- The vitamin premix has been modified excluding any added Thiamine.

Diet Form and Features
<ul style="list-style-type: none"> • Semi pure diet. 12 mm diameter pellets. • Pack size 5 Kg, vacuum packed in oxygen impermeable plastic bags, under nitrogen. Bags are packed into cardboard cartons to protect them during transit. Smaller pack quantity on request. • Diet suitable for irradiation but not suitable for autoclave. • Lead time 2 weeks for non-irradiation or 4 weeks for irradiation.

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by
