

Diet SF05-031 21% Fat, 0.15% Cholesterol Semi-Pure Rodent Diet

A semi-pure high fat diet formulation for laboratory rats and mice based on SF00-219, using AIN93 Vitamins.

- This Diet was developed to generate atherosclerotic lesions in a range of susceptible mice strains.
- We have evidence that irradiation at 25Kgy can cause vitamin losses and possibly other changes in the diet. Please contact us if the diet is to be irradiated.

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
