

Diet SF00-221

Guinea Pig and Rabbit Plus 1% Cholesterol

A fixed formulation diet based on our Guinea Pig and Rabbit pellets with 1% cholesterol added for use in artherogenic model systems.

- This diet has been used by several research groups including heart disease in several rabbit strains.
- If Diet is to be autoclaved, the recommended conditions are. Autoclave at 120° C for 20 minutes with a post autoclaving vacuum drying cycle. Some clumping of the diet can be expected, but the diet clumps can usually be easily broken. Modifying the drying time to leave some residual moisture in the diet can minimise the clumping. Do not autoclave at 135° C as this will result in significant clumping that will be difficult to break. It must be remembered that cholesterol is likely to be degraded by autoclaving.

Calculated Nutritional Parameters

Protein	18.00%
Total Fat	4.00%
Crude Fibre	13.00%
AD Fibre	13.00%
Digestible Energy	11 MJ / Kg

Ingredients

A fixed formula ration using the following ingredients.

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.**

We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
