Diet
SF12-031

23.5% Fat Modification of SF05-033

A semi-pure high fat diet formulation for laboratory rats and mice based on SF05-033. Some modifications have been made to the original formulation to suit locally available raw materials.

- No vitamin D has been added to this ration.
- Calcium, Phosphorous and Magnesium have been increased in this ration over the standard AIN93G diet.
- Fat content has been increased from 7% to 23.5% This has resulted in an increase in digestible energy.
- The digestible energy content is 22% higher than the control SF12-029.
- Wheat starch content has reduced accordingly

Calculated Nutritional Parameters

Calculated data uses information from typical raw material composition. It could be expected that individual batches of diet will vary from this figure. **Diet post treatment by irradiation or auto clave could change these parameters.** We are happy to provide full calculated nutritional information for all of our products, however we would like to emphasise that these diets have been specifically designed for manufacture by Specialty Feeds.
